EDUCATION

University of California, Berkeley

Berkeley, CA

- Scholarship Foundation Exceptional Leadership Scholarship Recipient
- Relevant Coursework: Data Structures & Algorithms, Efficient Algorithms & Intractable Problems, Computer Architecture, Machine Learning, Databases, Discrete Mathematics & Probability Theory
- Campus Involvement: Web Development Berkeley (President of Boot-camp Development & Industry Developer)

EXPERIENCE

Incoming Software Engineering Intern, Genuine Parts Company

Jun 2026

Databases Team

Technical Lead, LearnHaus AI

Jan 2026 - May 2026

- **Led a team of 9 engineers** to design and launch an internal evaluation platform for a production **LLM scoring system**, enabling standardized benchmarking across **4+ LLMs**
- Architected three core evaluation workflows—interactive scoring playground, human-vs-model comparison, and dataset-level pattern analysis—with unified side-by-side comparisons, reducing iteration time from **2–3 days to <2 hours (95% reduction)**
- Built advanced diffing and analytics tooling (**MAE, variance, correlation, clustering**), uncovering **12+ previously undetected biases** across **1K+ production scoring outputs**

Software Engineering Intern, Newrrium Foundation

Sep 2025 - Dec 2025

- Developed and shipped **15+** responsive UI components using **TypeScript, React, Next.js**, improving page load time and boosting mobile accessibility
- Designed relational schemas and optimized queries using **MySQL**, enabling efficient storage of **100+ entries** and reducing query latency
- Built an automated email pipeline using **Node.js + SQL task queues**, sending weekly updates to subscribers
- Coordinated API contract design and testing with a **10-person team**, reducing integration errors

PROJECTS

Volare: Review & Directory Service

- Built a scalable backend using **Java and Spring Boot**, exposing **6+ REST endpoints** for flights, restaurants, and user preferences, cutting average backend response times to under **<500ms on average**
- Integrated **Yelp and Amadeus Travel APIs** using **Spring WebClient**, aggregating real-time location, flight, and review data for **50+ active users**, improving search coverage by **38%**
- Implemented AI-powered classification and itinerary generation using **OpenAI APIs**, increasing relevance of travel recommendations by **26%** and reducing user input steps by **50%**
- Developed a responsive frontend in React, enabling users to quickly browse curated recommendations

Laser Tag: Social Media Platform

- Developed a backend in Python (**FastAPI**) to manage event creation, RSVPs, and user profiles through REST endpoints, supporting **35+ verified student accounts**
- Integrated **Firebase Authentication** with the Python backend to securely validate **Google OAuth** tokens, enabling seamless cross-platform login
- Structured **Firestore collections/subcollections** to store posts, events, and user activity logs, achieving real-time data sync across all clients and enabling instant UI updates using a Firestore NoSQL database,
- Implemented media upload pipelines using Firebase Storage, handling **100+ student-uploaded images** with automatic compression and secure URL generation
- Built responsive event discovery and social interaction pages using React, improving user engagement by **35%** from launch day

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript, TypeScript, HTML/CSS(Tailwind), Assemble(MIPS, x86, RISC-V), SQL

Backend: Node.js, FastAPI, REST APIs, PostgreSQL, Docker, Firebase/Firestore, Spring (Data JPA & WebClient)

Frontend & Systems: React, Next.js, TensorFlow, PyTorch, Git, Bash, Spring Boot
